Thermafiber manager receives Green Building certification

WABASH, Indiana – Thermafiber, Inc. is proud to announce that Angie Ogino, Technical Services Manager, is now certified as a LEED® Accredited Professional (AP) from the US Green Building Council.

“Angie has earned her place among the top group of highly competent and knowledgeable professionals specializing in sustainable building materials, design, and practices which eliminate or reduce the negative impact of a building on the environment,” says Jim Shriver, Director of Technical Services.

The US Green Building Council developed the LEED (Leadership in Energy and Environmental Design) Certification Program as a standard global rating system which recognizes buildings that earn credits in each of five sustainable categories. A building can be awarded one of four certification levels: Certified, Silver, Gold, and Platinum. A building’s certification level is based on the number of credits earned in each sustainable category.

With a recycled content of up to 90%, Thermafiber® insulation products contribute to LEED credits in addition to conserving energy. Ogino’s LEED AP certification will better enable her to assist architects, specifiers, and contractors that are designing and constructing green buildings with Thermafiber products.

About Thermafiber

Thermafiber, Inc. is the leading manufacturer of premium mineral wool insulation products. Their commercial insulation products are specified four-to-one over other brands of commercial mineral wool. For 75 years, Thermafiber has provided industry-leading commercial insulation solutions that conserve energy, control noise, reduce greenhouse gas emissions and provide lifesaving fire protection.
